

BathLyft

Janglewood
MEDICAL SUPPLIES

If you or your loved ones are apprehensive about getting into the tub, the BathLyft may be your solution. The BathLyft is a battery-operated bath chair that lowers and lifts the user in and out of the bathtub, reducing the strain on the user and preventing the risk of falls. The stable frame and base plate ensure the user's stability and safety, while the padding and optimized dimensions ensure a comfortable bathing experience. The Bathlyft's superior design allows for a backrest recline of up to 53° and lowers into the tub with a minimum sitting position of 2.5 from the bottom. The side flaps move into and out of place to create a transfer surface allowing the user even more peace of mind. The water-tight hand control floats in the tub for easy access while bathing and will provide the user with approximately 35 lifts on a single charge. The built-in safety switch will prevent use if the battery is too low to perform a full lift. The two-piece construction makes this lift easy to assemble, disassemble, store, and transport. Set-up is tool-free and ensures easy installation and operation.

The BathLyft weighs 26lbs with a weight capacity of 300lbs.
